## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 2 is rejected under the judicially created doctrine of double patenting over claim 6 of U. S. Patent No. 6,690,328 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: an antenna system; a tower/support structure; mounting a plurality of antenna elements arranged in an antenna array on said tower/support structure; a power amplifier comprising a relatively low power, relatively low cost per watt linear power amplifier chip; such that no appreciable power loss occurs between the power amplifier and the associated antenna element; a first RF to fiber transceiver on said tower/support structure, and coupling said first RF to fiber transceiver with said antenna structure; and a second RF to fiber transceiver adjacent a

Art Unit: 2821

base portion (base) of said tower/support structure, and coupling said second RF to fiber transceiver with said first RF to fiber transceiver by an optical fiber cable.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

### ***Allowable Subject Matter***

3. Claim 1 is allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the allowance of claim 1 is the inclusion of the limitations of the antenna structure comprising: a plurality of power amplifiers, each power amplifier being operatively coupled with one of the antenna elements; and a second RF to fiber transceiver mounted adjacent a base portion of the tower/support structure and coupled with the first RF transceiver by an optical fiber cable. It is these limitations found in the claim, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes this claim allowable over the prior art.
